Certificate

This is certify that the project entitled “FIFA World Cup Management System” is a bonafide report of the work carried out by

1) **Nasit Nirj** Student Id:21ITUOS111

2) **Parekh Bhavya** Student Id:21ITUOS040

3) **Parikh Aryan** Student Id:21ITUOS025

Of Department of Infotmation Technology , Semester IV,under the guidance and supervision for the subject Database Management System.They were involved in Project training during the academic year 2022-2023.

Head,Department Of Information Technology

1.SYSTEM OVERVIEW

Data is the code word of the computer industry. Data refers to a collection of facts usually collected as a result of observation and experiment or processes within a computer system. This may consist of numbers, words or images or observations of a set of variables. Data are often viewed as a lowest level of abstraction from which information and knowledge are derived.

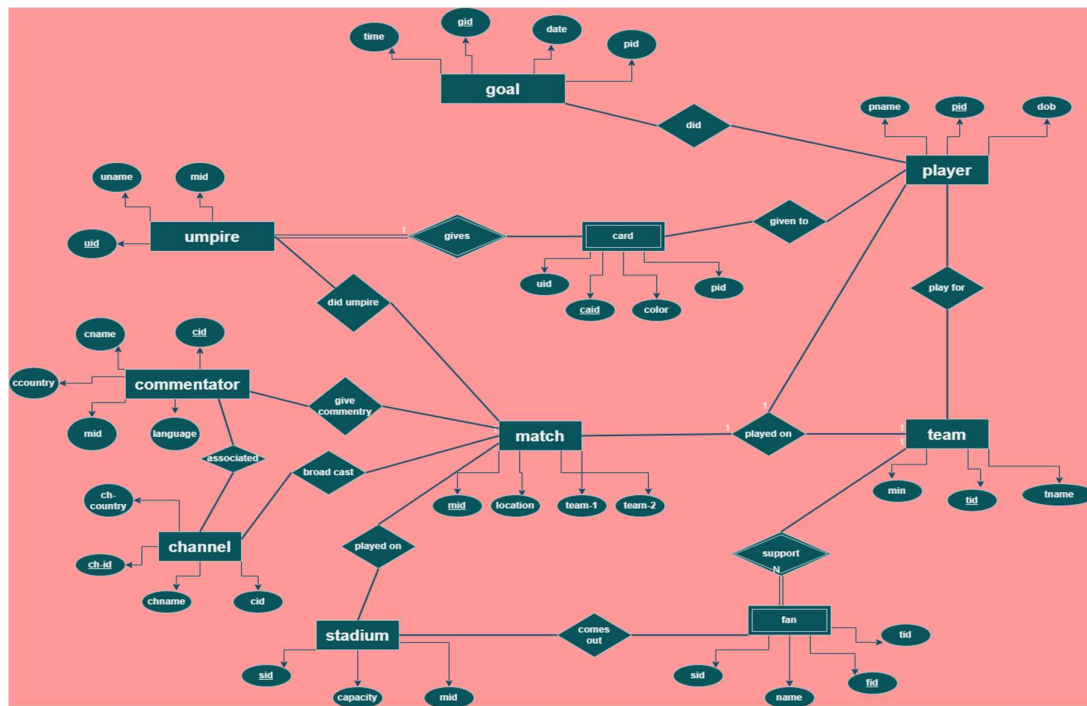

FIFA World Cup System is a system for football world cup that can provide all the information about the world cup management. With this system management and public can get the brief information about different entities like Cards (Yellow and Red), Goal (time and date), Player as well as umpire and etc.

1.1 ADVANTAGES OF THE PROPOSED SYSTEM

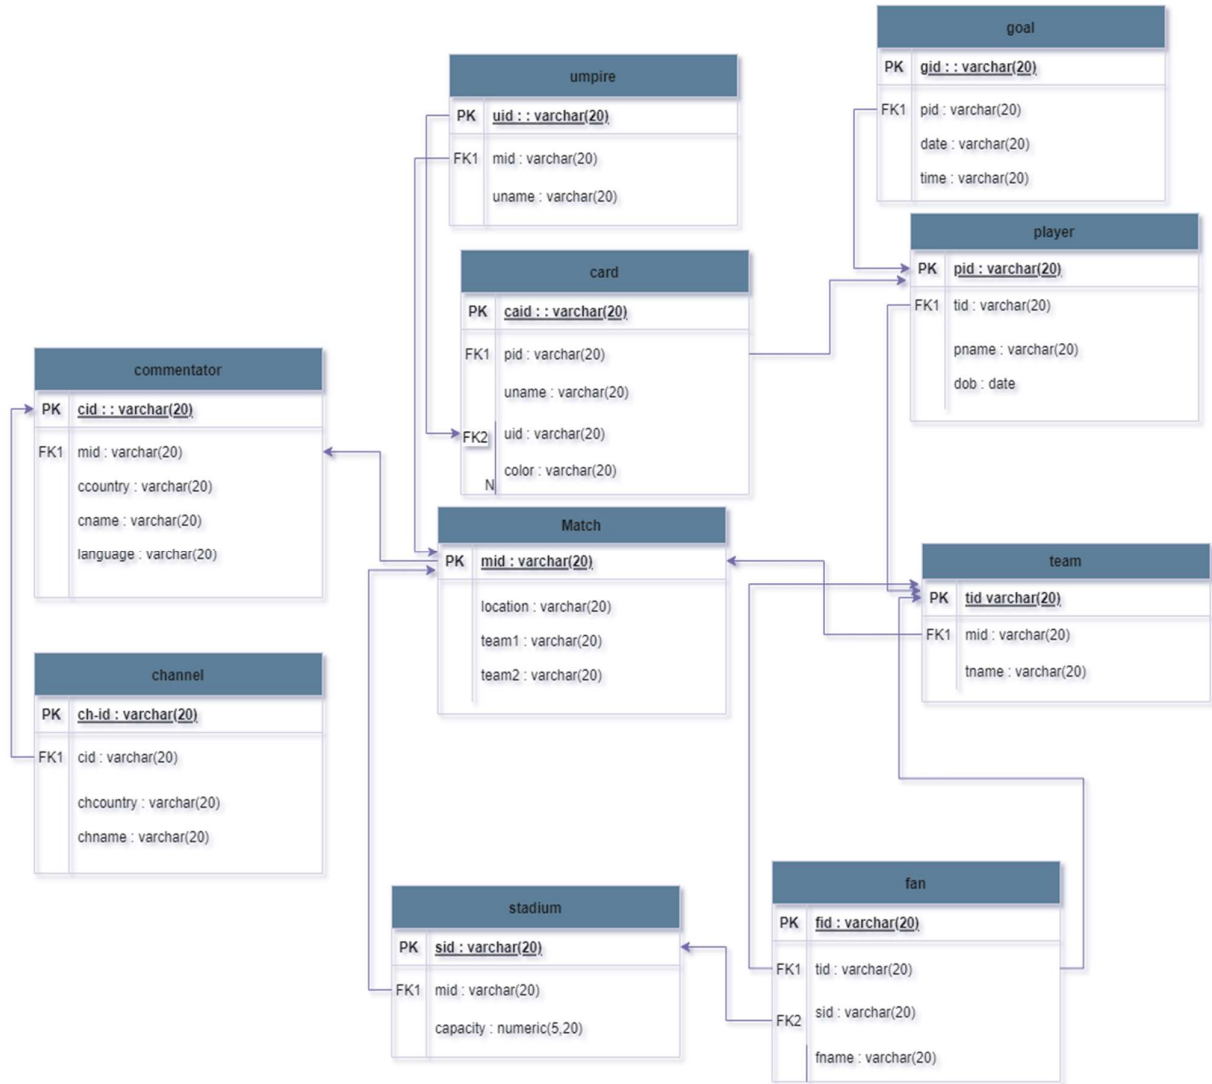

1. Infrastructure improvement can attract more people to the sport, as well as clubs can now offer better training facilities to their players. This becomes more vital especially in countries where local economy is not so strong to support huge investments in football.

3. The game is the chief form of entertainment in many countries across the world. Also, the game provides the host country with a lot of pride and publicity.

2. E-R DIAGRAM

3.SCHEMA RELATION

4.DATA DICTIONARY

4.1 Umpire

```
postgres=# \d umpire;
Table "public.umpire"
Column |          Type          | Collation | Nullable | Default
-----+-----+-----+-----+-----
uid    | character varying(20) |           | not null |
uname  | character varying(20) |           |         |
min    | numeric(10,0)         |           |         |
Indexes:
    "umpire_pkey" PRIMARY KEY, btree (uid)
Foreign-key constraints:
    "umpire_min_fkey" FOREIGN KEY (min) REFERENCES match(min)
Referenced by:
    TABLE "card" CONSTRAINT "card_uid_fkey" FOREIGN KEY (uid) REFERENCES umpire(uid)
```

4.2 Card

```
postgres=# \d card;
```

Column	Type	Collation	Nullable	Default
caid	character varying(20)		not null	
pid	character varying(20)			
uid	character varying(20)			
color	character varying(20)			

Indexes:

- "card_pkey" PRIMARY KEY, btree (caid)

Foreign-key constraints:

- "card_pid_fkey" FOREIGN KEY (pid) REFERENCES player(pid)
- "card_uid_fkey" FOREIGN KEY (uid) REFERENCES umpire(uid)

4.3 Goal

```
postgres=# \d goal;
```

Column	Type	Collation	Nullable	Default
gid	character varying(20)		not null	
time	character varying(20)			
date	date			
pid	character varying(20)			

Indexes:

- "goal_pkey" PRIMARY KEY, btree (gid)

Foreign-key constraints:

- "goal_pid_fkey" FOREIGN KEY (pid) REFERENCES player(pid)

4.4 Player

```
postgres=# \d player;
```

Column	Type	Collation	Nullable	Default
plname	character varying(20)			
pid	character varying(20)		not null	
dob	date			
tid	character varying(20)			

Indexes:
"player_pkey" PRIMARY KEY, btree (pid)

Foreign-key constraints:

```

5. DATA IMPLEMENTATION

A)SCHEMA

5.1.1 Match

create table match(team1 varchar(20) , team2 varchar(20) ,
min numeric(10) primary key , location varchar(20));

5.1.2 Stadium

create table stadium(sid numeric(10) primary key , min
numeric(10) references match , capacityinlakh numeric(15));

5.1.3 Commentator

CREATE TABLE COMMENTRATOR(CID VARCHAR(20) PRIMARY
KEY , MIN NUMERIC(10) REFERENCES MATCH , COUNTRY
VARCHAR(20) , CNAME VARCHAR(20) , LANGUAGE
VARCHAR(20));

5.1.4 Channel

CREATE TABLE CHANNEL(CHID VARCHAR(20) PRIMARY KEY ,
CHCOUNTRY VARCHAR(20) , CID VARCHAR(20) REFERENCES
COMMENTRATOR , CHNAME VARCHAR(20));

5.1.5 Fan

```
CREATE TABLE FAN(FNAME VARCHAR(20),FID VARCHAR(20)  
PRIMARY KEY,SID VARCHAR(20) REFERENCES STADIUM,TID  
VARCHAR(20) REFERENCES TEAM);
```

5.1.6 Umpire

```
create table umpire(uid varchar(20) primary key , uname  
varchar(20) , min numeric(10) references match);
```

5.1.7 Player

```
create table player(plname varchar(20) , pid varchar(20)  
primary key , dob date);
```

5.1.8 Goal

```
create table goal(gid varchar(20) primary key,time  
varchar(20),date date,pid varchar(20) references player);
```

5.1.9 Card

```
create table card(caid varchar(20) primary key,pid  
varchar(20) references player,uid varchar(20) references  
umpire,color varchar(20));
```

B)DATA INSERTION

5.2.1 Match

```
insert into match values('india','china',1,'berlin');
insert into match values('argentina','brazil',2,'paris');
insert into match values('psg','barcelona',3,'lusain');

(10 rows)

5.3.9 Umpire:

```
postgres=# select * from umpire;
```

uid	uname	min
u001	avi	1
u002	meet	2
u003	methali	3
u004	nir	4
u005	het	5

(5 rows)

5.3.10 Card:

```
postgres=# select * from card;
```

caid	pid	uid	color
ca001	p001	u001	yellow
ca002	p006	u002	yellow
ca003	p009	u003	red
ca004	p010	u004	yellow
ca005	p005	u005	yellow

(5 rows)

5.4 QUERIES USING BASIC DBMS CONSTRUCTS

JOIN & SUBQUERIES:

5.4.1 give the detail of channel with commentator.

```
postgres=# select chid,chcountry,chname,cname from channel inner join commentator on channel.cid=commentator.cid;
 chid | chcountry | chname | cname
-----+-----+-----+-----
 CH001 | INDIA    | RUDRAX | JAY
 CH002 | USA      | NIRAV  | LAURA
 CH003 | QATAR    | ARYAN  | ZURUKU
 CH004 | CHINA    | BHAVYA | SELENA
 CH005 | KOREA    | NIRJ   | JOHN
 CH006 | RUSSIA   | DEVEN  | JIM
(6 rows)
```

5.4.2 give name of commentator who give comentry on match number 2.

```
postgres=# select * from commentator where min=2;
 cid | min | country | cname | language
-----+-----+-----+-----+-----
 C002 |  2  | INDONESIA | LAURA | SPANISH
(1 row)
```

5.4.3 give all the match location who has played on stadium which has stadium capacity more than 16 lack.

```
postgres=# select location from match inner join stadium on stadium.min=match.min;
location
-----
berlin
paris
lusain
al khor
al rayyan
rio
moscow
jonisberg
solma
rome
(10 rows)
```

5.4.4 give the both team name of match where commentrator give comentry whose country is Japan.

```
postgres=# select team1,team2 from match where min in (select min from commentrator where country='JAPAN')
team1 | team2
-----+-----
psg    | barcelona
(1 row)
```

5.4.5 give capacity of stadium whose team 1 is France and Portugal.

```
postgres=# select capacityinlakh from stadium where min in (select min from match where team1='france' and team2='portugal')
capacityinlakh
-----
7
(1 row)
```

5.4.6 give the time and date of goal which is done by the player who receive red card.

```
postgres=# select time,date from goal where pid in(select pid from card where color='red');
time | date
-----+-----
10:36pm | 2022-05-06
(1 row)
```

5.4.7 give the information on goal.

```
postgres=# select * from card ;
caid | pid | uid | color
-----+-----+-----+-----
ca001 | p001 | u001 | yellow
ca002 | p006 | u002 | yellow
ca003 | p009 | u003 | red
ca004 | p010 | u004 | yellow
ca005 | p005 | u005 | yellow
(5 rows)
```

5.4.8 give the match number where this umpire take umpiring who give red card to player.

```
postgres=# select min from umpire where uid in (select uid from card where color='red');
min
-----
3
(1 row)
```

5.4.9 give the date of birth of player whose player id is T001.

```
postgres=# select dob from player where tid in(select tid from team where tid='T001');
dob
-----
1960-07-30
(1 row)
```

5.4.10 give the name of player whose date of birth id 30 jan-1960.

```
postgres=# select pname from player where dob='30-07-1960';
pname
-----
messi
(1 row)
```

5.5 FUNCTION && TRIGGER

5.5.1 create a trigger to get new stadium capacity input which not be less than 60 in lakh

Function:

```
create function check_cap() returns trigger as $$  
BEGIN  
if NEW.capacityinlakh<60 then  
raise exception 'capacity Must be greater than 60';  
end if;  
return NEW;  
END;  
$$  
LANGUAGE plpgsql;
```

```
postgres=# create function check_cap() returns trigger as $$  
postgres## BEGIN  
postgres## if NEW.capacityinlakh<60 then  
postgres## raise exception 'capacity Must be greater than 60';  
postgres## end if;  
postgres## return NEW;  
postgres## END;  
postgres## $$  
postgres=# LANGUAGE plpgsql;  
CREATE FUNCTION
```

Trigger:

create trigger cap_check

BEFORE INSERT OR UPDATE

ON stadium

FOR EACH ROW

EXECUTE PROCEDURE check_cap()

;

```
postgres=# create trigger cap_check
postgres=# BEFORE INSERT OR UPDATE
postgres=# ON stadium
postgres=# FOR EACH ROW
postgres=# EXECUTE PROCEDURE check_cap()
postgres=# ;
CREATE TRIGGER
```

Check: insert into stadium values('s011',1,20);

```
postgres=# insert into stadium values('s011',1,20);
ERROR:  capacity Must be greater than 60
CONTEXT:  PL/pgSQL function check_cap() line 4 at RAISE
```

5.5.2 create function to count the total stadium whose capacity is given between specific value given by user.

Function:

```
CREATE function stadium_caprange(cap_i int, cap_f int)
returns int
language plpgsql
as
$$
declare
stadiumcount integer;
begin
select count(*)
into stadiumcount
from stadium
where capacityinlakh between cap_i and cap_f;
return stadiumcount;
end;
$$;
```

```

postgres=# CREATE function stadium_caprange(cap_i int, cap_f int)
postgres=# returns int
postgres=# language plpgsql
postgres=# as
postgres=# $$
postgres## declare
postgres## stadiumcount integer;
postgres## begin
postgres## select count(*)
postgres## into stadiumcount
postgres## from stadium
postgres## where capacityinlakh between cap_i and cap_f;
postgres## return stadiumcount;
postgres## end;
postgres## $$;
CREATE FUNCTION

```

Check: select stadium_caprange(2,20);

```

postgres=# select stadium_caprange(2,20);
 stadium_caprange
-----
              6
(1 row)

```

5.5.3 create trigger to insert new commentator into the database which should not belong to the Japan.

Function:

CREATE function check_comm_country() returns trigger as \$\$

BEGIN

if(NEW.country='japan') then

raise exception 'commentrator must not belong to japan!';

end if;

return NEW;

end;

\$\$

LANGUAGE plpgsql;

```
postgres=# CREATE function check_comm_country() returns trigger as $$
postgres$$ BEGIN
postgres$$ if(NEW.country='japan') then
postgres$$ raise exception 'commentrator must not belong to japan!';
postgres$$ end if;
postgres$$ return NEW;
postgres$$ end;
postgres$$ $$
postgres=# LANGUAGE plpgsql;
CREATE FUNCTION
```

Trigger:

create trigger country_check

BEFORE INSERT OR UPDATE

ON commentrator

FOR EACH ROW

EXECUTE PROCEDURE check_comm_country();

```
postgres=# CREATE function check_comm_country() returns trigger as $$
postgres$$ BEGIN
postgres$$ if(NEW.country='japan') then
postgres$$ raise exception 'commentrator must not belong to japan!';
postgres$$ end if;
postgres$$ return NEW;
postgres$$ end;
postgres$$ $$
postgres=# LANGUAGE plpgsql;
CREATE FUNCTION
```

Check: insert into commentrator(cid,min,country,cname,language)
values ('c011',11,'japan','scarlet','japanese');

```
postgres=# insert into commentrator(cid,min,country,cname,language) values
postgres-# ('c011',11,'japan','scarlet','japanese');
ERROR:  commentrator must not belong to japan!
CONTEXT:  PL/pgSQL function check_comm_country() line 4 at RAISE
postgres=#
```

5.6 CURSOR:

Create a cursor to select match id starting from 4 and fetch the next match id.

Cursor syntax:

begin;

BEGIN

declare my_match_id cursor for

select min from match where min > 4;

fetch next from my_match_id;

close my_match_id;

cursor;

```
postgres=# begin;
BEGIN
postgres=# declare my_match_id cursor for
postgres=# select min from match where min > 4;
DECLARE CURSOR
postgres=# fetch next from my_match_id;
 min
-----
    5
(1 row)

postgres=# close my_match_id;
CLOSE CURSOR
postgres=#
```
